

NO: 24-01-99

SUBJECT: A/C Refrigerant Charge

DATE: Jan. 29, 1999

DISCUSSION:

The refrigerant charge and system oil specification used in production for all Grand Cherokees has been reduced. Vehicles built September 16, 1998 and later (MDH 0916XX) will contain 24 ounces (1.5 lbs.) of refrigerant and 170 cc (5.8 oz.) of refrigerant oil. Earlier built vehicles contained 26 ounces (1.6 lbs.) of refrigerant and 220 cc (7.4 oz.) of refrigerant oil. The A/C system label reflects these specifications. When servicing vehicles built prior to September 16, the new specifications should also be used. The reduction in oil and refrigerant was implemented to improve A/C system performance.

New A/C system labels are available (p/n 55116446AA) and should be installed when the A/C system is serviced.
